

October was a very fun month where kids discovered a new season: Fall!

Autumn is a time of the year where the nature is tinted in many colors.

Wind starts to blow bringing cold all along. Raindrops fall and refresh the dry soil everywhere. Autumn leaves fall down. Kids enjoy watching the leaves falling from the trees and hearing them cracking under their tiny feet while learning new vocabulary such as:

snail

Squirrel

mushroom

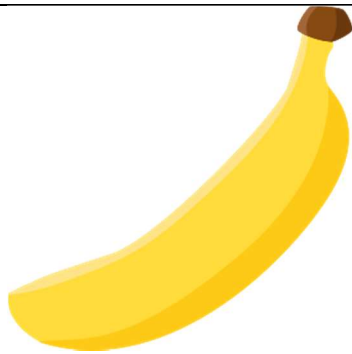

hedgehog

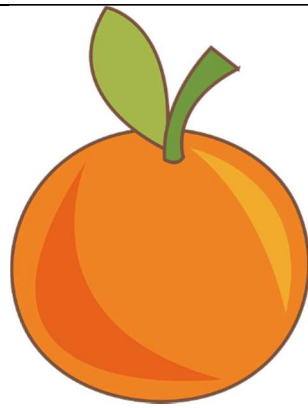

acorn

corn cob

banana

orange

grape

pear

Furthermore, kids enjoyed a fall workshop full of activities and learnt new concepts through sensory and fun games!

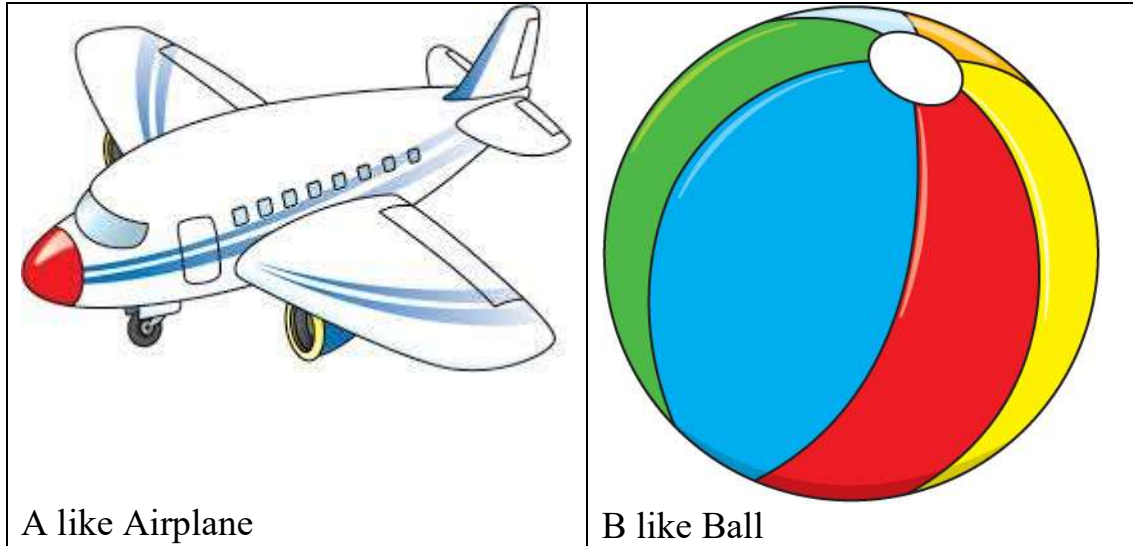

In the same theme, children also discovered the red color with a “red day” organized by the teachers, where kids played so many games related to this color!

New concepts were introduced in math such as : inside/outside- over/ under- around- a little/ a lot- big/ small- find the path- sorting activities

Furthermore, kids discovered letters A and B while matching them to objects that started with that said letter such as:

On another note, Montessori activities are very important for the child's development, and kids enjoy it a lot and learn new activities progressively:

1- Rolling and unrolling the mat

2- Sponging

3- Write in sand

Finally, kids completed the month of October with a Halloween photo session, followed by a halloween party in the nursery, where kids came disguised, went for trick-or-treat and pumpkin carving...etc.

It was a memorable day!

What is November hiding to our little kids ?

The upcoming month will be full of activities and events since hygiene and 5 senses are the highlights of the month, and kids will also discover their beloved country and the colors of its flag during independence day!
