

Dear Parents,

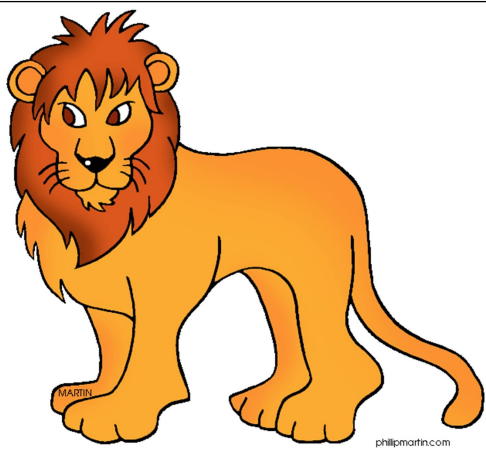

The lion is the king of the forest, the zebra looks like a horse, the giraffe has a long neck. Some animals eat grass, have four legs, fly, and crawl ... all these fun facts and many more have been discovered during the past month:

The theme: Wild animals and circus was very exciting and intriguing. Through the activity book, dominoes, puzzles, labels, children were able to discover the characteristics of the wild animals that live in the forest and the circus animals that perform in front of an audience

The children learnt to name them, to recognize their natural environment, their movement, their habitat, their families and their sounds.

They also learnt that a Circus is a group of performers that entertain the spectators with their extraordinary performances where people get together and enjoy funny and risky acting such as acrobats, trapeze artists and tightrope walkers.

A lion

A tiger

A zebra

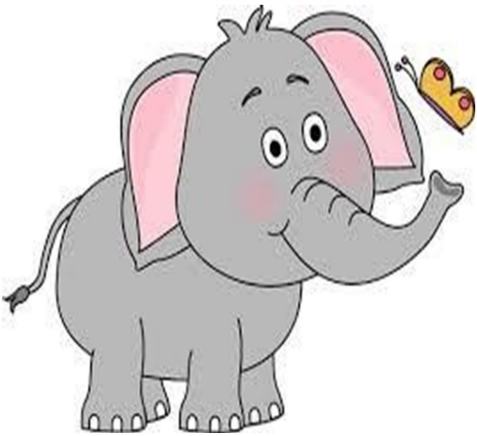

A hippopotamus

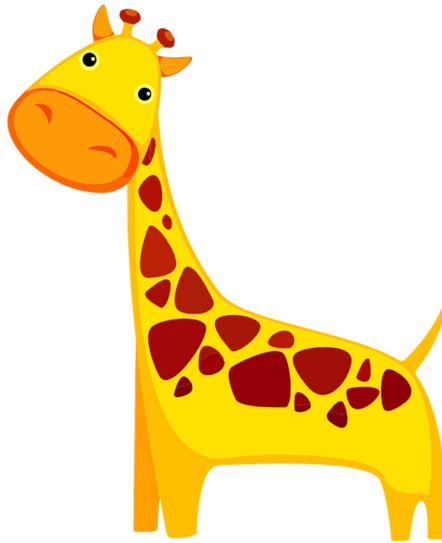

A bear

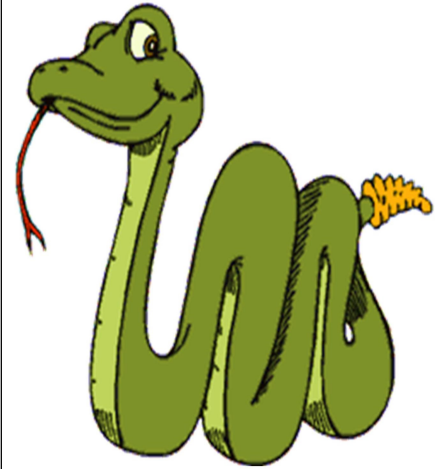

A monkey

An elephant

A giraffe

A snake

A revision of the following opposites was discovered daily through various experiment:

Spotted/ not spotted

With stripes/ without stripes

Fly/ walk/ jump

Fat/thin

Fast/ slow

Quiet/ noisy

Sleep/awake

Heavy/ Light

Big/ small

Push/ pull

Letter G was discovered through images and flash cards

Children were so excited to know that the number 8 looks like a snowman

Wavy and zigzags lines were also traced.

Next month's theme is all about insects and flowers. Why not go to the garden to explore Mother Nature, smell the flowers and observe the small insects?
